

Grassform Product Guide

- »» Hand cut-outs for easy transport, lifting, installing and secure storage.
- »» Choose alternatives to expensive and heavy steel plates and bog mats.
- »» Steer clear of slippery, short-term and unsafe plywood.
- »» Avoid oversold pedestrian plastic mats.
- »» Reduce the risk of bogged-down vehicles, property damage and environmental harm.
- »» Project a professional image to customers and avoid injuries by providing efficient and safe work conditions.
- »» Easy fit connectors for quick installation.

Features

Euromats have a large surface area that distributes the weight of vehicles which enables our Euromats to be used for effective ground protection in areas such as gardens, parks, golf courses and events. Just think of the way our mats can help provide excellent ground protection where vehicles have to cross.

When you consider the cost of plywood sheets which are not resistant to water, snow, ice, mud or oil and are not anti-slip, then investment in our Euromats will pay off in a short period of time and provide peace of mind, safety and excellent ground protection.

Chevron Traction Surface

Our unique self cleaning grip surface is aimed at dispelling mud but will still give grip to vehicles or pedestrians as they cross the grass protection mats. The traction cylinder built into the underside of the mat also aid in gripping the surface, whether that be soil, grass or synthetic turf. These small cylinders prevent sliding and provide stability to the mat.

Technical Specifications

Material: HDPE (100% Recyclable)

Dimensions

Length: 2410mm

Width: 1200mm

Depth: 12mm

Weight: 35kg

Useable Surface Area: 2.892m²
